

- 9. Α composition of matter comprising antisense an oligonucleotide comprising consecutive nucleotides, nucleotide sequence of which is set forth in one of SEQ ID NOS: 1-13, wherein one or more sugar of the oligonucleotide contain an -OMe group at its 2' position.
- 26. A method of promoting the regression of vascular lesions, comprising introducing into a vascular cell an amount of a composition of matter comprising an antisense oligonucleotide comprising consecutive nucleotides, the nucleotide sequence of which is set forth in one of SEQ ID NOS: 1-13, effective to reduce the levels of bcl-xL protein produced, promoting the regression of vascular lesions, wherein one or more sugar of the oligonucleotide contain an -OMe group at its 2' position.
- 28. The method of claim 26, wherein the introducing comprises using porphyrin as a delivery agent.
- 36. composition of matter comprising an antisense oligonucleotide comprising consecutive nucleotides, nucleotide sequence of which is set forth in one of SEO I NOS: 1-13, wherein one or more sugar of the oligonucleotide is modified at its 2' position.
